

## Buxton's Take-A-Part Foraminotomy Rongeur

Preserve facet joints, dorsal processes and inter-and supraspinous ligaments using selections from this family of foraminotomy rongeurs. Buxton offers these instruments in the original up curve and a more modest "shallow" up-curve model to accommodate a broader range of anatomies and anomalies. Recently added are thin footplate options and the new Bayonet shaft versions with light curve for endoscopic and small incision procedures. With a pop, pull and click, these curved beauties come apart.
